

Stardock to Showcase Exclusive Version of Fences Software on New Dell Canvas at CES 2017

Fences drives down desktop clutter leaving more space for creativity

Plymouth, MI. – January 5, 2017: Stardock is collaborating with Dell to offer an exclusive version of their popular desktop organization product, Fences, at CES 2017 for the new Dell Canvas. This pairing creates a one-of-a-kind experience for users that clears desktop distractions from Canvas' 27-inch QHD Adobe RGB display, offering a clutter-free workspace for creating.

"We are excited to be a part of this new collaboration product for Dell," said Chris Kowal, VP Business Development, Stardock. "Fences will make it possible for users to hide and organize all of their desktop icons, which will give them more creative space to work on."

Stardock's Fences tucks files and folders away in plain sight within designated portals while also providing the functionality of pulling specific content into the creative workspace. Based on preference rules, users can customize how icons are viewed and where files originate from.

Over 5 million users around the world rely on Fences every day to keep their PC desktops organized for quick and easy access to the programs and files they use most. The new Fences v3.0 places frequently used destinations visible and organized on the desktop by creating a fence from any folder. [Buy Fences](#) for your PC today.

Fences will be featured on the Canvas product at CES 2017, which is hosted January 5-8 in the Las Vegas Convention Center. Attendees of the show will see the integration of Stardock's custom Fences with Dell's Canvas firsthand at the [Venetian Palazzo Hospitality Suites](#).
